Edinburgh Napier University Advanced Web Technology(set09103)

Target

About three weeks ago I know the information about my coursework. My first idea is about repairing cars on the internet. Because when my parents or other relative decide to repair cars they always spend lots of days to buy, so I want to make it easier.

Abstract

In this coursework1, I have roughly determined his frame structure. And it can already implement a part of his functions, this includes four pages: Home, Characters, Log in, Development, and some features: Drop-down menu, Search bar, Table, Hyperlink, Image automatic loop display, Capsule tab, Navigation bar…But it still has a lot of features not implemented, is an unfinished page, but fortunately, I will finish it in coursework2.

Introduction

1. This is my main page – Home. I mainly introduce the basic information of the website..

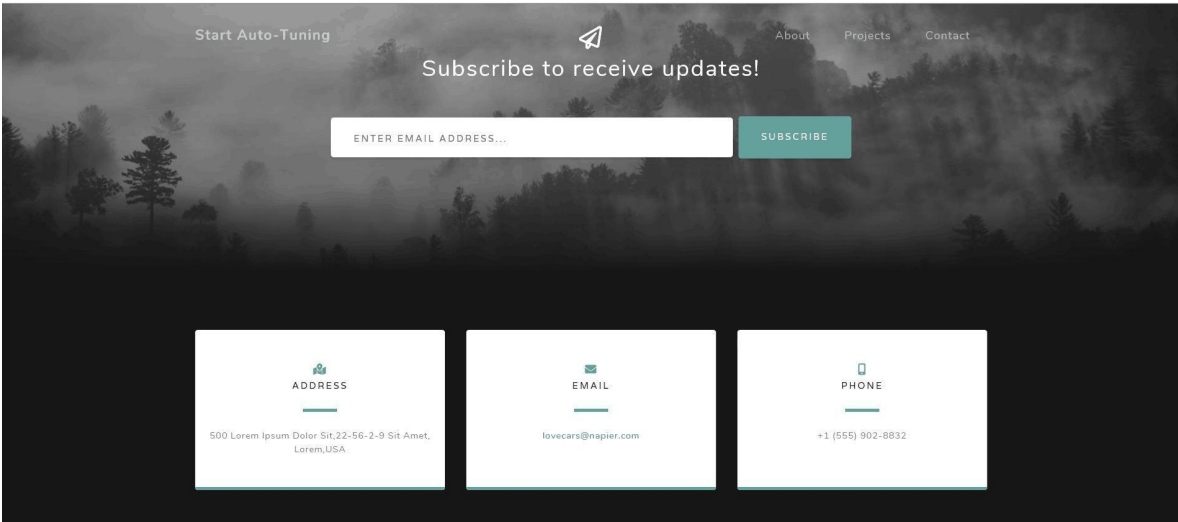

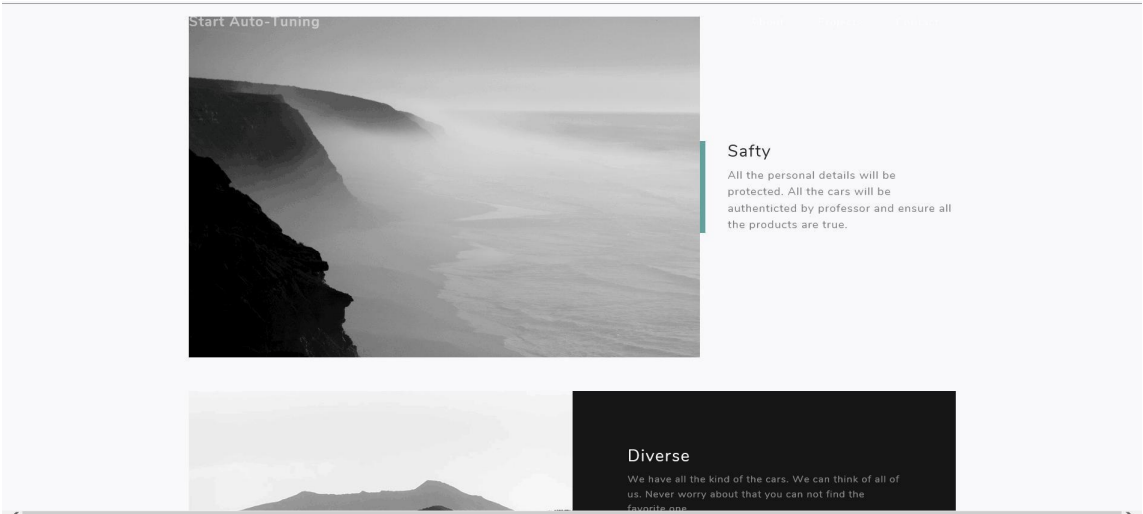

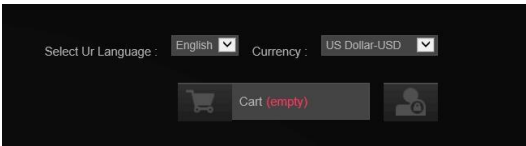

<Home1.1>

<Home1.2>
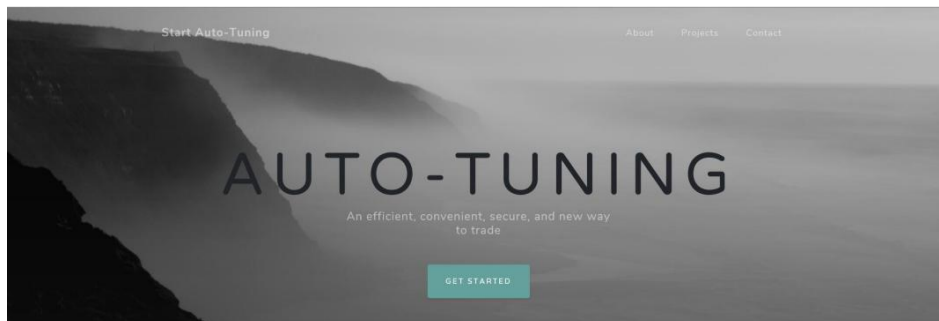

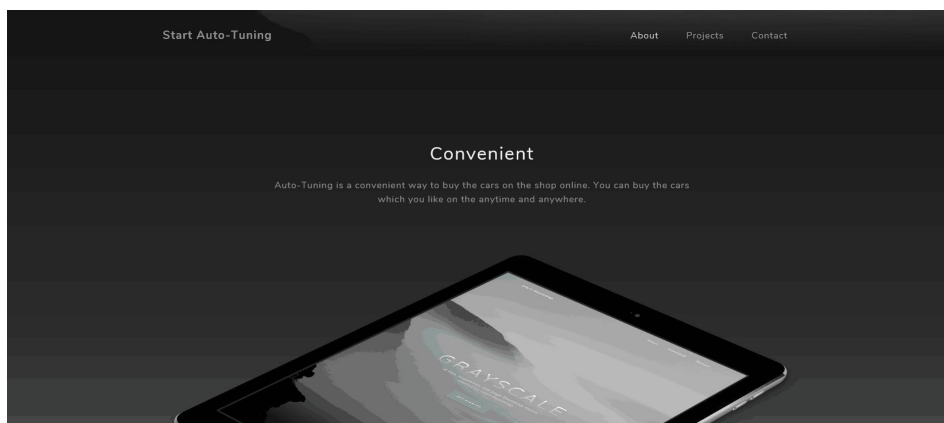

Just like the home button of an Apple phone, if you forgot which page you are on, in <Home2.1> you can see that there is a <u>Home button</u> here that makes it easy for you to get back to the main page.

<Home2.1>   <Home2.2>

 In this box people can choose their own language and the payment, they also can see their products which they have choose.

this is three different ways for people to choose, only have three ways because I don't want to make more:)

<log in>

It is easy to see there is a button beside the Cart. People can press the button to log in or register your own account, it is convenient for customers when they put the products into the cart. People can choose login or register. All the details will be stored in the data base. It is convenient for customers to login next time.
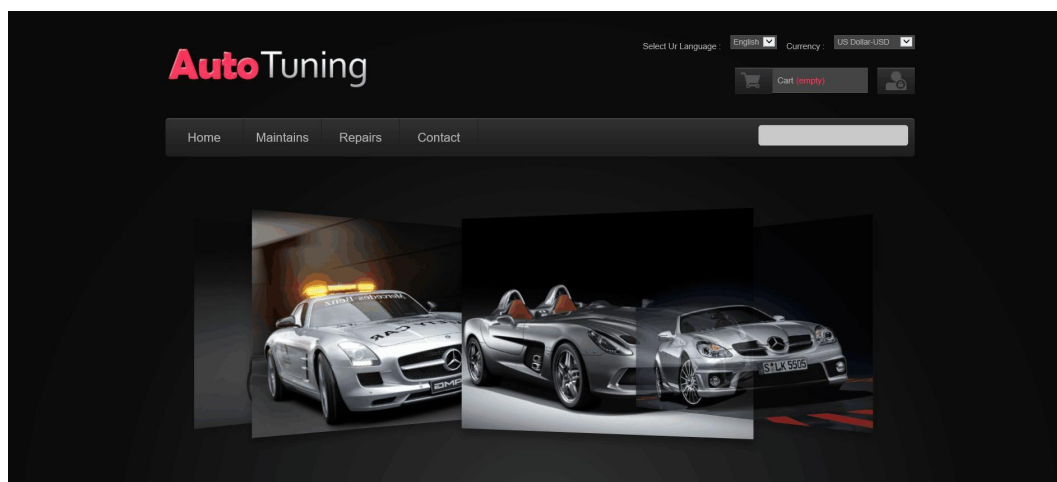

Our Price Makes You Stay Here More

When you decide to deliver your car to us, we will be responsible for it.

Price: $500

Your Scheme :

Color: Silver   Size: Large   Quality: 1

## Why Should We Take Care Of Our Car?

The Car Is Just Like Our Child

A car is made up of thousands of parts. The performance of functional components decreases with wear, aging, corrosion, etc. This kind of change happens gradually in many parts when the vehicle is moving normally. No vehicle is used in exactly the same way, and we cannot predict the wear and tear of each component under inspection. Therefore, it is necessary to check and maintain the parts regularly, so that the performance of the vehicle is restored to the best condition.

Especially at front of the vehicle brake, direction, and the technical performance of the tire, lights, horn, the rearview mirror is complete and effective, all kinds of oil, coolant, brake fluid to maintain normal, etc. These are all drivers should check before every car, don't be careless, lightly, once broke down on the road, will bring needless trouble to oneself, one thousand had an
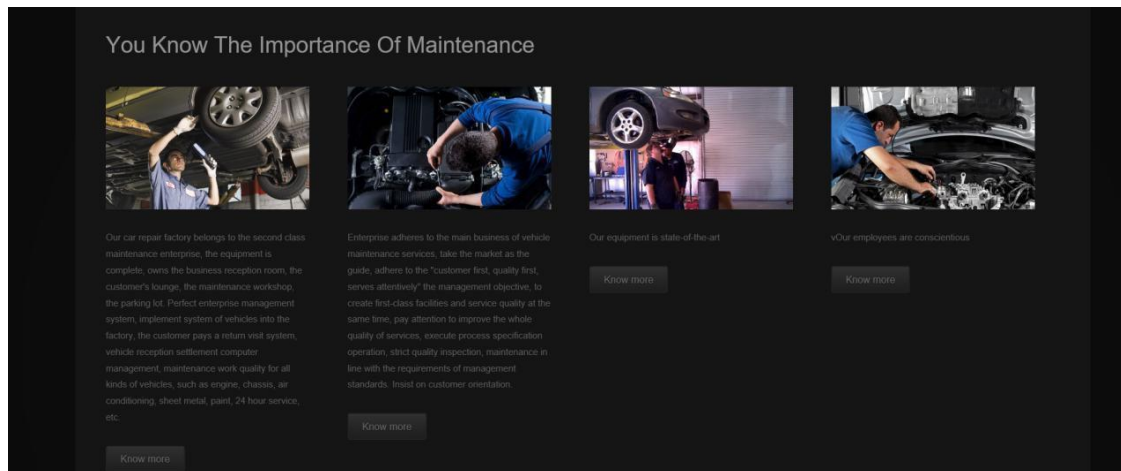

. The first page is shop page, customers could see we have repaired many kinds of cars, and the second page is about the purchase page, customer could choose their scheme like color, size and quality. The third page is about contacting us it has our location on the Google Map(I choose random selection:)) people also can send our emails. The next one is about explaining why we should take care of our cars the last one also introduce the importance of maintenance.

Enhancements

Although I finish my first web work, I also think there are many problems exist, such as many button could not be used or be used for many times. Still not very skilled, actually it is hard for me:(

Critical Evaluation

When I design my home page I miss so many problems like the images do not load, this is because I write wrong folders sometimes. I also want to take some music on my web but I failed finally. I think the hardest for me is to understand the every code in the web.

Personal Evaluation

In this coursework I have learned how to use vim and other tools, but they still very hard for me until now. I don't understand every codes' meaning and it cause I do my coursework slowly, and there must be a people with me and help me with my many many problems or I could not finish my work it is really hard for me so I ask many friends to help me:(I add a data base into my project but I still meet many problems such as http500, it makes me headache.

References

In the process of learning to design a web page, I checked a lot of information., I read the tutorial for this code and learned it. But on the Bootstrap, there is some code I have no ability to completely modify, I modified some of them. Below are the css,js which I have used:

Js/css all in the vender folder.
